DETAILED ACTION

1. The Art Unit location of your application in the USPTO has changed. To aid in correlating any papers for this application, all further correspondence regarding this application should be directed to Art Unit 1732, Examiner Leo Tentoni.

Specification

2. The disclosure is objected to because of the following informalities: On page 1, the status of the parent application should be updated.

Appropriate correction is required.

3. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The following title is suggested: PROCESS OF MAKING A CELLULOSIC FIBER COMPOSITE.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 1732

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary.

Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claims 1-43 are rejected under 35 U.S.C. 103(a) as being unpatentable over Riebel et al (U.S. Patent 5,593,625 A) in combination with Young et al (U.S. Patent 2,899,352 A).

Riebel et al (see the entire document, in particular, the abstract; col. 1 lines 46-48; col. 3, lines 17-64; col. 5, lines 28-46; col. 7, lines 25-45; col. 11, line 64 to col. 12, line 17; col. 12, lines 56-58; col. 13, lines 22-24; col. 14, lines 21-37; col. 16, lines 39-51; col. 19, lines 17-47) teaches a process of making a cellulose fiber composite as claimed, except that Riebel et al does not explicitly teach the step of felting, which is taught by Young et al (see the entire document, in particular, col. 1, lines 13-19; col. 2, lines 11-64; col. 6,

lines 69-72) and such would have been obvious to one of ordinary skill in the art at the time the invention was made in the process of Riebel et al in view of Young et al principally in order to manufacture a desired cellulose fiber composite product (e.g., a structural board).
